## **FPUK's Cat Revolution - Quality Matters**

*Company is the best placed aftermarket supplier for  
Catalytic Converters after the introduction of  
EC Type Approval.*

Fuel Parts UK, a leading manufacturer and supplier of fuel and emissions components, has announced a development drive on its premium range of catalytic converters. Already in the past year Fuel Parts UK has added over 5000 vehicle applications and this rate of development is set to continue throughout 2010.

The Bromsgrove-based company ensures all of its converters fully comply with the new type approval regulations. The premium range of Catalysts were originally designed to solve common "light on" issues and currently offers the market a quality choice with a fit and forget attitude.

Fuel Parts UK's premium range are 100% Type Approved to ECE Regulation 103 and are packed in a bright new green livery, displaying gold quality seals. Each premium cat contains a fitting kit, where available, and a limited lifetime warranty. The catalyst also comes with a copy of the official ECE R103 approval certificate, specific to that part and the individual vehicle it has been approved for.

Additional part numbers are being added weekly to offer the most comprehensive range of approved converters from one source. The latest applications in development include Nissan Note 2005 onwards, Citroen C8 2007 onwards and Citroen C4 2007 onwards.

Together FPUK's warehouse and distribution departments have been responsible for generating new locations and space for Type Approved product and are already seeing increases in demand from existing and new customers.

Fuel Parts UK managing director, Andy West, said: "The whole Fuel Parts team have a tremendous amount of knowledge on the R103 legislation, so our customers can rely on us to ensure they can conform with the requirements. We are now the best placed converter supplier in the aftermarket to give our customers the assurance and guarantee that the quality product we supply, meets EC Type Approval Regulation 103."
