### Fuel Parts UK Join the Premiere League

*Company is giving aftermarket customers a choice in the converter market with the introduction of a Premium 100% Type Approved Range*

Fuel Parts UK, a leading manufacturer and supplier of fuel and emissions components, has announced that it is giving their customers more choice by introducing a new range of 100% Regulation 103 Type Approved Catalytic Converters.

The Bromsgrove-based company is keen to enhance its quality Catalytic Converter business, so has introduced The Premium Range which are 100% Type Approved to ECE Regulation 103. The Premium range of cats are packed in a bright new green livery, displaying gold quality seals. Each cat will contain a fitting kit and a copy of the official ECE R103 approval certificate, specific to that part and the individual vehicle it has been approved for.

Fuel Parts UK managing director, Andy West, said: "The most important reason for the introduction of this new range is to give our customers the assurance and guarantee that the product will solve all of the current OBD II fault light problems. With Type Approval also covering issues such as fitment, durability and specific parts for specific vehicles, it will reinforce the value of these quality products."

This new product line will use Fuel Parts UK's existing part numbering system with the addition of a 'P' (Premium) prefix. This will ensure a smooth and speedy introduction without having to make changes to current catalogues.
