PRESS RELEASE

ALSO FOR IMMEDIATE WEB RELEASE

Bag it up

Fuel Parts UK, a trusted supplier and manufacturer of emission and fuel system components, has just introduced a new bagging system for its range of Ignition Coils, Lambdas and Mass Air Flow Sensors.

As part of the company's improving quality standards, parts will be placed in a small, medium, or large sized tamper proof clear bag. This fully supports Fuel Parts right part first time attitude – providing the discouragement to replace parts by trial and error but by proper fault diagnosis.

Chris Manton, Fuel Parts UK's technical manager said "We are constantly responding to customer feedback and looking at ways we can improve on our quality procedures; we believe sealing our products in bags will benefit all parties."

Fuel Parts also offer a series of training programmes and garage workouts which promote how to rectify faults first time. The whole of the FPUK team are fully qualified to help with selecting the right part from their comprehensive catalogues at www.fpukfindapart.co.uk
