Fuel Parts expands its 'mani-cat' range

Company is working hard to develop its range of manifold catalytic converters

Fuel Parts UK, a leading aftermarket supplier and manufacturer of fuel and emissions components, has addressed the increasing bias towards manifold catalytic converters by extending its range of 'mani-cat' products to 20 part numbers.

As a component that sits closer to the engine so that it can get up to temperature faster and therefore meet stricter emissions regulations, the 'mani-cat' is supplied with a manifold casting so that it can be fitted directly on to the engine of the vehicle. It is an application that is becoming increasingly common on modern cars.

In order to stay ahead of its competition, Fuel Parts has recently invested heavily in the castings that are required to manufacture 'mani-cat' applications. And this commitment has enabled the Bromsgrove-based company to increase its range to 20 applications. The company now boasts one of the largest ranges in the aftermarket.

"It's a completely different type of product to the traditional catalytic converter, but because the trend for manufacturers fitting them to new cars is increasing, we've made a considerable investment to make sure our customers have access to the products that they need," explained Fuel Parts managing director, Paul Tomlinson.

"We've already established the largest selection of catalytic converters in the aftermarket, and we're now working hard to stay ahead of the game in terms of 'mani-cats' as well."

The Fuel Parts UK range has applications for many modern vehicles including: Vauxhall Astra 1.4 (2000 onwards), Vectra 1.8 (2002 onwards), Mariva 1.6 (2003 onwards), Corsa 1.2 (2000-2004), Toyota Avensis 2.0 (2000-2001), Honda Civic 1.5 (1996-2000), Hyundai Lantra 1.6 and 2.0 (1998 onwards), Ford Fiesta 1.25 (1999-2000), Fiesta 1.25 (2002 onwards) and the Ford Ka 1.3 (2002 onwards).
